Education

University of Central Florida — Orlando, FL

Bachelor of Science in Computer Science, GPA: 3.93 — *Aug. 2024 – May 2028*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Software Development, Systems Software, Computer Logic & Organization, Discrete Structures I & II, Security in Computing
- **Leadership:** Secretary, AI@UCF (450+ members), hosted **10+** hands-on workshops on LLMs, AI agents, and NLP averaging **20+** attendees

Experience

Software Engineering Intern — May 2026 – Aug. 2026

USAA — *San Antonio, TX*

- Built product-based member search in Conversant, USAA's internal CRM, cutting a member lookup from **4+ screens** to one **React/Redux** view by fetching linked accounts and product details server-side in **Spring Boot**.
- Replaced **6** hand-parsed legacy REST integrations with one typed **GraphQL** API so the CRM fetches only the fields it needs through a single schema, rolled out behind a feature flag with instant legacy fallback.
- Shipped member search to production in **3** staged releases (roles config, **GraphQL** API, **React** front end) so each layer could be verified and rolled back independently, after designing the data model and API contract.

Research Assistant — Sep. 2026 – Present

Hardening Build Systems Project, UCF — *Orlando, FL*

- Classifying **100+** ACM papers by build pipeline attack (secret exfiltration, binary backdoors, pipeline hijacking) across **GitHub Actions**, **Jenkins**, and **Maven** to scope a systematic review of CI/CD supply-chain security.

Projects

uKnight | *Spring Boot, WebRTC, Next.js, PostgreSQL, Redis, Firebase, GCP Cloud Run, Docker*

- Led a **6-engineer team** to ship an anonymous video-chat app to **72** .edu users in **3 weeks**, guaranteeing no double matches with a **Redis** queue driven by atomic **Lua** scripts.
- Built **WebRTC** signaling over **STOMP/WebSockets** with a **SockJS** fallback so calls connect on networks that block WebSockets, authenticating every connection with .edu OTP and **Firebase** tokens.
- Made **GCP Cloud Run** instances stateless by moving session and match data from server memory into **Redis**, so any instance can serve any user and the app scales horizontally.

Paradise – 3rd Place Overall, ShellHacks 2026 | *JavaScript, Node.js, WebRTC, YOLO, CLIP, Gemini API, WebHID*

- Guided DeafBlind users to a Waymo and onto its door handle with no audio or screen by fusing **5** computer vision models across a phone and laptop into a **50ms** haptic loop on two **Joy-Cons**.
- Ran fast **YOLO** detection on the phone, streamed video over **WebRTC** to a heavier laptop model, and sent frames YOLO couldn't resolve to **Gemini**, alerting only on a hit in **3 of the last 5** frames to cut false alarms.
- Identified the target Waymo among look-alike robotaxis at ∼**90%** recall with only **4** false positives in **654** negatives using a **CLIP**-based classifier trained on **779** vehicle crops.

Apex: F1 Pit-Wall Simulator | *Next.js, FastAPI, WebSocket, XGBoost, NumPy*

- Predicted F1 lap times within **0.91s** at mid-race using only laps run so far, **41%** better than a naive baseline, with a two-stage **Ridge** + **XGBoost** model.
- Ran **10,000 NumPy** Monte Carlo race simulations per strategy update in **14ms** (p95), streaming results from **FastAPI** to a **Next.js** dashboard over **WebSockets**.
- Engineered **14** features from **10,244** laps across **11** Grands Prix and **22** drivers, and removed a base-pace feature that leaked circuit data into the model.

Technical Skills & Awards

Languages: Java, Python, C, JavaScript (ES6+), SQL
Frameworks: Spring Boot, React, Next.js, Redux, Node.js (Express), FastAPI, GraphQL, WebRTC, WebSockets
ML & Data: XGBoost, scikit-learn, NumPy, pandas, PyTorch
Databases & Infrastructure: PostgreSQL, Redis, Docker, GCP Cloud Run, AWS
Tools & Testing: Git/GitHub, GitHub Actions, JUnit | **Cert**: AWS Certified Cloud Practitioner (CLF-C02)
Awards: KnightHacks 2025, 1st Place (Auritas Challenge) | ShellHacks 2026, 3rd Place Overall (300+ projects)
